

IN THE SPECIFICATION:

Page 2, the paragraph beginning at page 1 is to be amended as follows:

~~According to the method and system of the invention, for cooling an engraving system of an engraving device for engraving printing forms, the engraving system is provided with a plurality of engraving heads respectively carried by supports. Each engraving head is individually cooled with its own cooling unit.~~

According to the method and system of the invention, for cooling an engraving head mounted on a support, first and second heat exchangers are provided on the support, the second heat exchanger being associated with the engraving head being cooled. A coolant flows between the first heat exchanger and the second heat exchanger.
